ALYX

Strategic Partner Overview

A live Layer 1 where communities create assets, launch liquidity, use AI execution, and build markets around intelligence.

Strategic Partner Overview v2 · July 2026

The partner signal: ALYX is already operational

ALYX is not a concept-stage network. Mainnet, native markets, asset issuance, AI execution, and two IBC access routes are live today.

What exists today

Mainnet chain, public explorer, DEX, TokenFactory, AI execution, validators, live tokenomics, Noble USDC, Cosmos Hub ATOM, and public transaction proof.

What partnership accelerates

Liquidity depth, distribution, integrations, validator diversity, builder onboarding, documentation, data visibility, and operating capacity.

What makes it different

Communities do not only hold an asset. They can create, pair, trade, execute AI, participate in liquidity, validate, and verify activity inside one economy.

Positioning: strategic partners scale a live protocol through measurable market, infrastructure, and ecosystem outcomes.

The problem: communities have attention, but fragmented infrastructure

Communities lack market rails

NFT, creator, gaming, meme, and AI communities often have culture and users but lack simple rails for native issuance, liquidity, pricing, utility, and verifiable market activity.

AI and liquidity are disconnected

Many AI products use off-chain subscriptions while crypto protocols trade tokens without native machine-service settlement or transparent execution pricing.

Market creation is fragmented

Teams stitch together chains, bridges, DEXs, token tools, analytics, wallet flows, and community operations. Every dependency adds friction and another trust boundary.

ALYX unifies settlement + DEX + TokenFactory + AI execution + IBC access + public proof.

The solution: one live economy around ALYX

THE ALYX FLYWHEEL

More assets → more ALYX pairs → more trading → more execution → more reasons to use and secure ALYX.

Partner relevance: collaboration accelerates an operational network, not the construction of a hypothetical one.

Market structure: nine live ALYX-centered pools

Snapshot: July 22, 2026 · ALYX-side liquidity shown

Pool #1 · ALYX / AI

5.03M ALYX

Forever lock

Pool #2 · ALYX / GPU

3.01M ALYX

3Y lock

Pool #3 · ALYX / DATA

3.01M ALYX

3Y lock

Pool #4 · ALYX / MODEL

3.01M ALYX

3Y lock

Pool #5 · ALYX / DW

1.61M ALYX

3Y lock

Pool #6 · ALYX / USDC

325.08K ALYX

Forever lock

Pool #7 · ALYX / BETTER

2.68M ALYX

Forever lock

Pool #8 · ALYX / BAMBI

111.73 ALYX

No declared lock

Pool #9 · ALYX / ATOM

11.58K ALYX

Forever lock

ALYX remains the routing and settlement hub across AI, community, stablecoin, and interoperable markets.

Liquidity transparency: separate the metrics

The market surface distinguishes ALYX-side liquidity from the cross-asset reserve sum so headline figures remain interpretable.

18.67M ALYX
TOTAL ALYX LIQUIDITY
ALYX-side reserves

1.15B
RESERVE SURFACE
multi-asset units

4
VERIFIED CORE POOLS
AI · GPU · DATA · MODEL

9
LIVE DEX POOLS
all current markets

Why the distinction matters

Adding different token units does not create a single valuation metric. ALYX-side liquidity measures the common hub reserve; Reserve Surface describes the combined raw units across both sides of live pools.

Partner diligence

Review pool reserves, indexed swaps, volume, fee estimates, LP ownership, lock status, denom identity, and transaction history through the public market surfaces.

Dynamic figures are dated snapshots. Live chain and market pages supersede the numbers in this document.

AI execution: paid intelligence on ALYX rails

ALYX anchors authorization and payment to mainnet while specialized execution environments process model, vision, indexing, and routing tasks.

ALYX Core LLM

Per 1K tokens · 0.025 ALYX · Live

ALYX Vision Alpha

Per image task · 0.05 ALYX · Live

ALYX Data Indexer

Per month · 5 ALYX · Live

ALYX Agent Router

Per routing job · 0.1 ALYX · Live

Execution flow: sign → settle → execute → deliver. Payment proof does not guarantee output accuracy or availability.

Community markets: a practical partnership wedge

ALYX gives communities a connected path from identity to market activity and machine-service use.

ALYX-settled execution

Bring your community. Create your market. Launch liquidity. Use intelligence. Verify every action.

Supported entry routes: Noble USDC and Cosmos Hub ATOM

Noble USDC · Pool #6

Start with 10 USDC through the official Get ALYX flow. The route supports ALYX delivery, matched Pool #6 liquidity planning, and forever LP-lock policy. Noble origin: noble-1 / uusdc.

Cosmos Hub ATOM · Pool #9

Bridge ATOM from cosmoshub-4, then use the ATOM Genesis Liquidity Vault for liquidity participation. ATOM is valued in USDC terms, ALYX is allocated, treasury ALYX is matched, and LP shares are locked forever.

10 USDC

These are participation and liquidity routes, not promises of profit, resale value, rewards, or exchange listing.

ALYX utility and monetary design

- Native gas and base settlement on alyx-1.
- Validator delegation, consensus security, and governance participation.
- DEX swaps, pool creation, liquidity positions, and on-chain LP locks.
- AI execution settlement and machine-service pricing.
- TokenFactory asset issuance, metadata, and ALYX-paired markets.
- IBC-supported liquidity routes through Noble USDC and Cosmos Hub ATOM.

Flagship AI market

ALYX/AI holds approximately 5.03M ALYX in forever-locked liquidity and remains the primary AI economy anchor.

Expanded market graph

BETTER, BAMBI, and ATOM extend the market surface beyond the original six-pool snapshot.

Public proof

Tokenomics, validators, pools, assets, AI pricing, blocks, transactions, and supported routes are publicly reviewable.

The next milestone is scale: adoption, liquidity quality, independent infrastructure, integrations, and trust.

Go-to-market: make ALYX simple, useful, and visible

Community market acquisition

Target NFT, creator, AI, gaming, meme, and builder communities. Offer native issuance, ALYX market formation, liquidity tooling, AI execution, and visible on-chain proof.

Liquidity-led growth

Deepen high-value ALYX routes, improve reserve quality, expand reliable liquidity commitments, and communicate lock state and market data clearly.

Proof-based distribution

Show actions rather than claims: bridge supported assets, create a denom, launch a pool, lock LP shares, swap, execute AI, delegate, and verify transactions.

Lead with what people can do - create, trade, execute, build, secure, and verify.

Strategic collaboration lanes

Liquidity + Market Quality

Reserve depth, route reliability, LP commitments, market operations, analytics, and transparent performance measurement.

Growth + Distribution

Partner communities, educational content, ecosystem communications, events, media, and user onboarding.

Ecosystem + Builders

Integrations, developer tooling, TokenFactory launches, grants, machine-service providers, and application partnerships.

Infrastructure + Security

Independent validators, public endpoints, monitoring, audits, legal review, incident readiness, and operational resilience.

Every collaboration lane should be tied to scope, milestones, ownership, reporting, and measurable outcomes.

Partnership models: structure follows contribution

ALYX does not present a fixed public fundraising round in this overview. Any economic arrangement must be separately negotiated and reviewed.

Liquidity partner

Provides supported assets, market operations, or durable liquidity commitments.

Pool, reserves, lock state, execution milestones.

Ecosystem operator

Drives community onboarding, partner markets, campaigns, and measurable user activity.

Scope, attribution, delivery cadence, performance metrics.

Infrastructure partner

Operates validators, endpoints, relayers, monitoring, security, or data services.

Service levels, key controls, uptime, incident obligations.

Strategic builder

Develops integrations, applications, AI routes, tooling, or market infrastructure.

Roadmap, acceptance tests, IP, maintenance, milestones.

Possible structures may include service agreements, liquidity arrangements, grants, revenue participation, or asset-aligned incentives - subject to diligence and qualified counsel.

The strategic partner profile

ALYX is seeking operators and organizations that bring execution leverage, not passive attention.

- Understands early networks, liquidity formation, community markets, and sovereign infrastructure.
- Can contribute distribution, integrations, market access, technical operations, capital, or execution capacity.
- Accepts transparent scopes, measurable milestones, vesting or lock conditions where applicable, and public accountability.
- Respects legal, compliance, security, wallet, and user-protection requirements.
- Builds for sustained network use rather than short-term promotional activity.

Discussion framework

1. Define contribution 2. Verify authority and capacity 3. Set milestones and reporting 4. Structure economics with counsel 5. Execute in controlled phases 6. Publish verifiable outcomes

The opportunity is a live, verifiable network with clear acceleration lanes: liquidity, users, builders, infrastructure, integrations, and trust.

ALYX

Make ALYX easy to understand, useful enough to adopt, and strong enough to trust.

A live AI blockchain economy where communities create assets, launch liquidity, use machine services, and build markets around intelligence.

Think. Trade. Evolve.
